

Supercoultter Samurai™

Inspired by farmers, the **Supercoultter Samurai™** offers many of the same benefits of our Supercoultter vertical tillage tool, but is designed to move more dirt, thanks to its slightly angled aggressive Samurai blades. The result is a field finish that many of today's producers desire — **more soil movement than true vertical tillage provides, but less intensive than conventional tillage or high-speed disks.** This unique approach makes the Supercoultter Samurai a simplistic, effective spring and fall solution for **residue management, light tillage and seedbed preparation.**

FEATURES & BENEFITS

Light Tillage Performance

The front gang blades are positioned at a 3-degree angle, and the rear gang blades are positioned at a 5-degree angle for light tillage performance. Blades are spaced 10 inches apart on each gang with the front and rear gangs offset for an effective 5-inch spacing.

Light Footprint

Similar to our popular Supercoultter, the simplistic design of the Supercoultter Samurai has a light enough footprint to help producers get in the field earlier than bulkier tillage tools allow. This advantage allows farmers to complete spring fieldwork quicker, so they can plant sooner.

Super-Flex™ C-Shanks

The unique Super-Flex™ gang mounting system is designed to absorb shocks from rocks and stumps, providing protection from blade damage. The toggle-mounted, 7-Lip sealed ball bearings are also designed to self-align as the gang flexes.

Samurai™ Blades

The Summers exclusive Osmundson Mfg. Co. patented Samurai disk blades on the Supercoultter Samurai offer the latest in blade technology. They are slightly concave with a sawtooth design that excels at sizing residue and moving soil.

Hydraulic Hitch

The patented hydraulic hitch allows operators to easily optimize in-field performance by transferring weight between the front and rear gangs.

Finishing Attachments

The Supercoultter Samurai is available with a variety of finishing attachments, including the recommended harrow and rolling basket combo for superior seedbed preparation. The baskets feature internal mud scrapers and are hydraulically controlled to adjust down pressure or raise them completely.
